**OSMOSIS INVESTMENT MANAGEMENT WINS 'INNOVATION IN CLIMATE CHANGE INVESTMENT'
AWARD AT 2010 CLIMATE CHANGE AWARDS**

LONDON: Osmosis Investment Management, the independent asset management boutique specialising in the growth sector of sustainable global equity markets, has been awarded for 'Innovation in Climate Change Investment' at the 2010 Climate Change Awards.

The awards recognise the role investment funds play in investing and supporting new technologies that will ultimately lead to solutions to combat climate change. The ceremony was held last week in the Members Dining Room at the House of Commons.

Gerrit Heyns, partner at Osmosis Investment Management comments:

'We are extremely pleased to have been recognised at these prestigious climate change awards. Our goal is to help investors bridge the perceived gap between doing the right thing and making money. Through our innovative approach to this challenge we are able to demonstrate that these are not mutually exclusive outcomes and that strong returns can be achieved in the transition to a low carbon economy.'

"Our London listed Climate Solutions ETF is the first of many innovative investment products we hope to launch that address the challenges of transition without sacrificing return. It offers diversified access to the low-carbon sector in a liquid and transparent manner. It is climate change 101 for the investment community."

Osmosis Investment Management LLP ("Osmosis Management") is a specialist independent asset management company focused on providing low carbon investment solutions to a global investor base. Founded in 2008, Osmosis Investment Management develops investment solutions that enable investors to access the significant global opportunities in the low carbon sector.

About Osmosis:

Osmosis Investment Management LLP ("Osmosis Management") is a specialist independent asset management company focused on providing low carbon investment solutions to a global investor base.

Founded in 2008, Osmosis Investment Management develops investment solutions that enable investors to access the significant global opportunities in the low carbon sector.

The Osmosis team has extensive knowledge of the low carbon market and a deep understanding of the unique attributes of investing in the sector. This, combined with its strong asset management experience, enables the firm to provide investors with targeted low carbon investment solutions that are anticipated to deliver superior, risk adjusted fund returns over the long term.
